

# Sawyer Hayes

E.P. "Tom" Sawyer State Park

## Community Center

How we are incorporating  
sustainability into our events.

1. *Efficient lighting.* We not only use energy efficient lighting, but we have zones that can be adjusted for energy savings.
2. *Energy efficient equipment and appliances.* With a high-efficient HVAC system and energy saving refrigerator and microwaves our equipment is a beautiful shade of "green".
3. *Recycling facilities.* Our Park is a Jefferson County Recycling Site. We place recycling bins in the meeting room for paper, glass & plastics.
4. *Compost product.* Our compost container is available and emptied after each meeting in our compost pile adjacent to the Sawyer Community Gardens.
5. *Rain barrel.* Our container plants are watered with water gathered from our roof - better nutrients and less erosion.
6. *Bulk containers for beverages* are our choice when we prepare refreshment breaks.
7. *Soy based and recycled products* are used in our refreshment break paper products.
8. We are convenient to *mass transportation.*
9. Use *recycled paper products* for marketing flyers.

We are always in search of new innovative alternatives of providing you and our earth with "conscious" service, product and practice.
